The **THIN Dynamic LED Parking Sign P-150-13** is specifically designed to optimize seasonal and winter parking management. Featuring **wireless communication and activation,** this cutting-edge solution allows your teams to efficiently control and update signage remotely, significantly simplifying maintenance operations.

By leveraging **dynamic communication,** this sign enhances message clarity and ensures that parking regulations are easily understood by citizens, leading to improved compliance and a smoother traffic flow. Additionally, its **real-time information broadcasting** capability minimizes response time, reducing the need for manual interventions and optimizing overall maintenance efforts.

Solar or AC/DC Power

Easy Installation on standard posts

Wireless activation

Increases Driver Awareness in Real Time

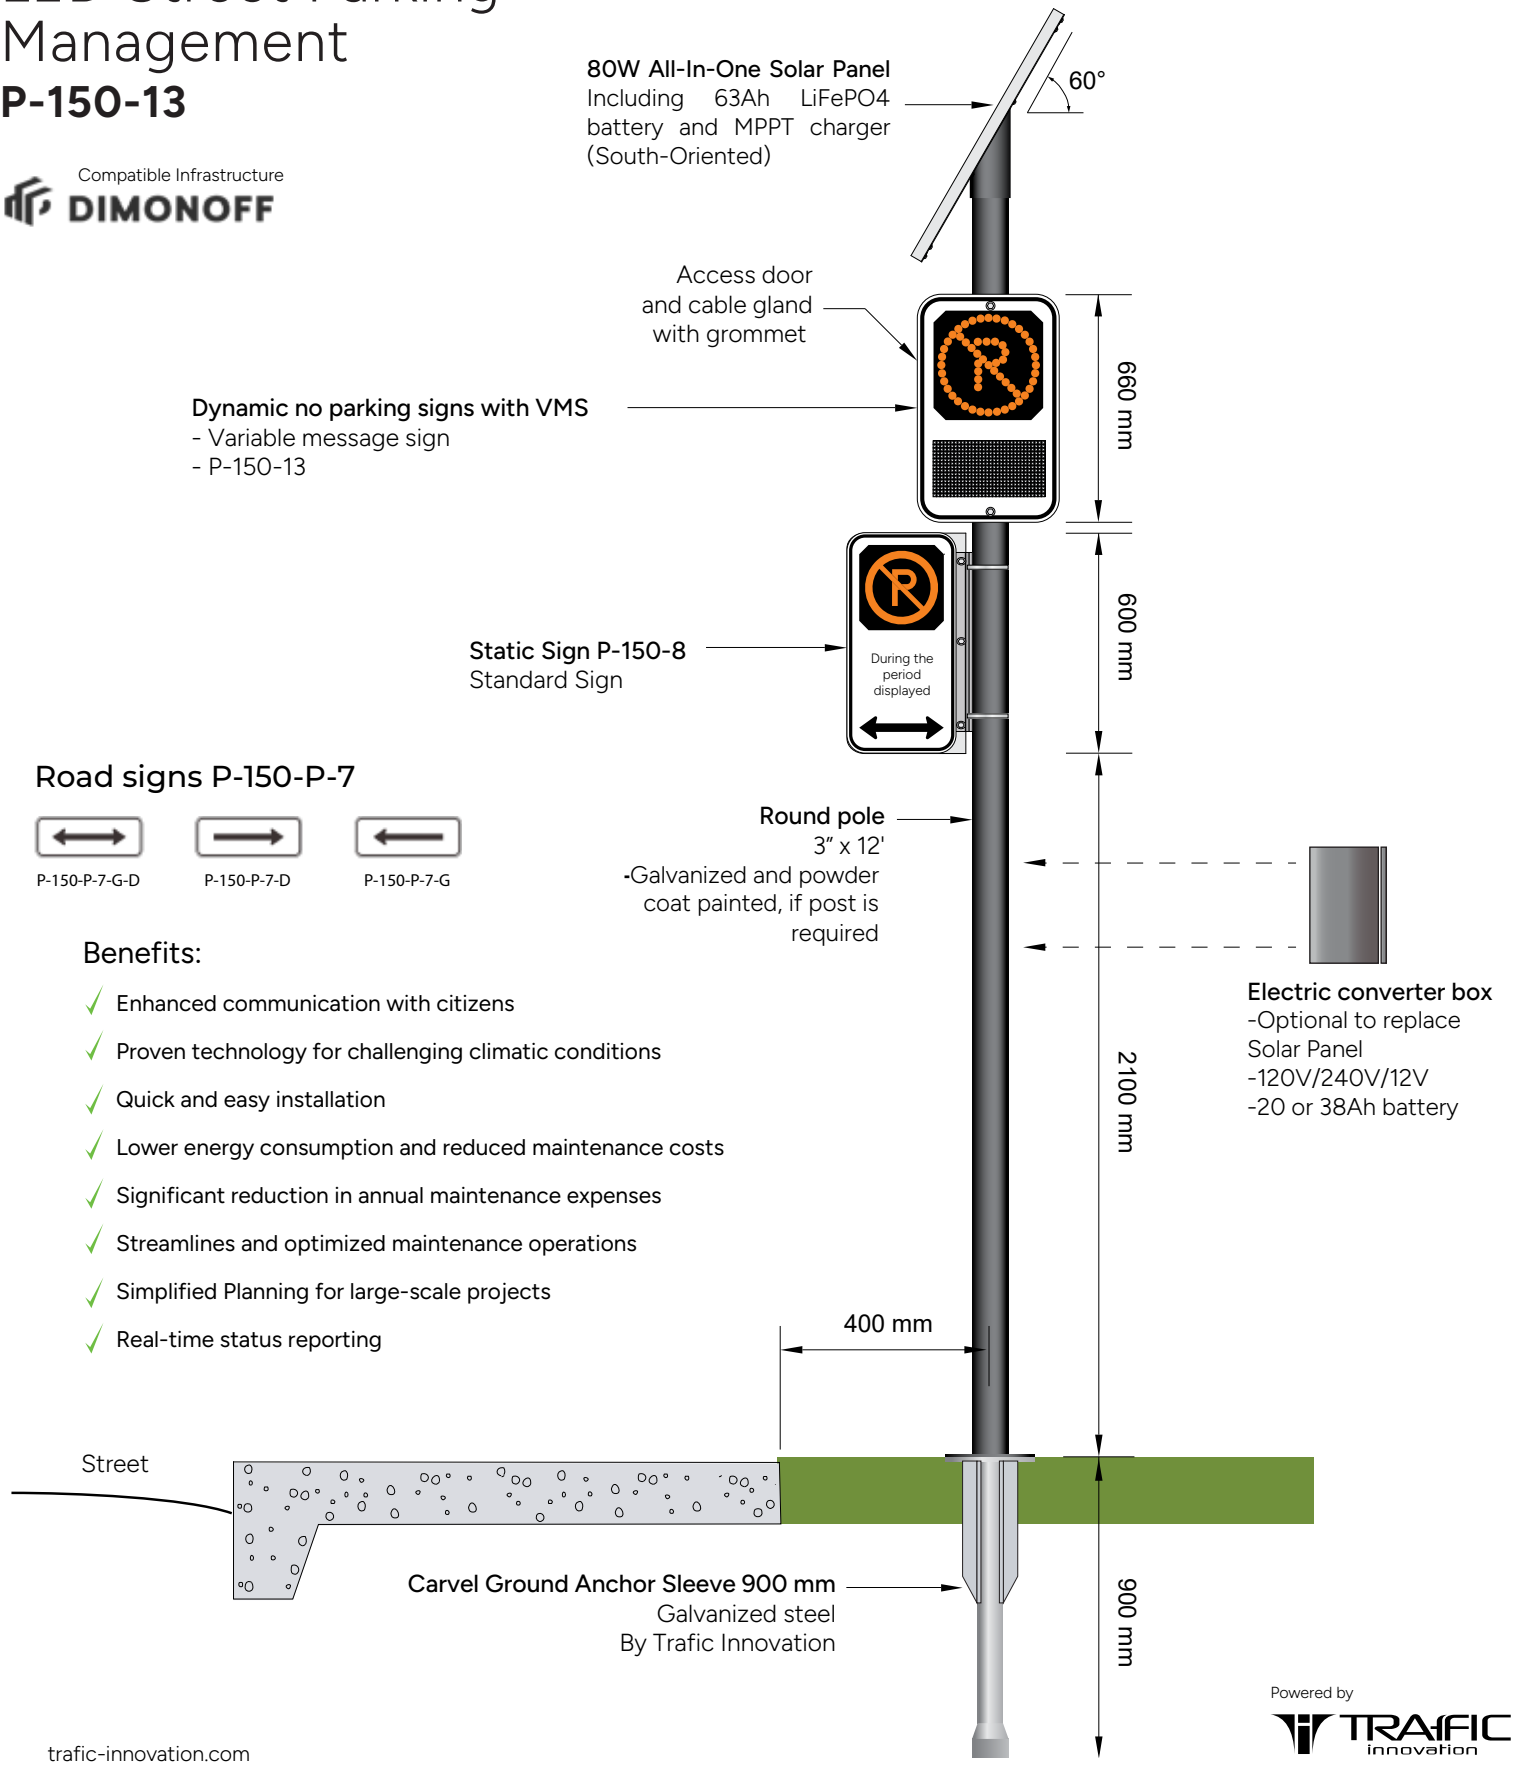

Major Project
4000+ Panels installed in the city of Laval, QC

Manage by Navigate traffic cloud™
